PREFACE

This is a simplified edition of medical equipment for the various health units by the National Advisory Committee on Medical Equipment. The more detailed report issued in October 2000 contained the detailed specifications and definitions of individual equipment. Sets of equipment and instruments were reviewed and improved upon by specialist members of NACME. A new software programme for planning and Management of Assets in Health care was introduced and is in use at the Health Infrastructure Division of the Ministry.

Following comments and suggestions from all those who used the more detailed edition, NACME embarked on a revised simpler edition indicating equipment quantities in various units, estimated costs (US \$) and specification of individual equipment without installation and freight costs.

Other recurrent costs like maintenance and spare parts can be totaled for each facility. I need to emphasize the important factor of proper maintenance and regular servicing where necessary of the equipment, to ensure optimum output and long life. Evaluation of the performance of the equipment is an important function and we still request all users of equipment in this country to maintain records on the equipment under their charge and pass the information collected to the Committee.

The Committee would like to thank all the people of Uganda who have taken active interest in ensuring security of the equipment which has been procured by Government at a great cost. Without public support, the life of this equipment in Health Units would have been seriously curtailed.

Dr. E.K. Naddumba
